

EMBEDDED

WHERE SKILL MEETS VALUE

[HOME](#)[ABOUT](#)[CONTENT](#)[OTHERS](#)

ABOUT US

Embedded Games is building a decentralised gaming platform that rewards skill, not chance. Our goal is to create a trustless, wallet-based ecosystem where players can compete in PvP and PvE games with verified results and no middlemen.

By blending the ease of Web2 gameplay with the transparency and ownership of Web3, Embedded Games redistributes transaction fees and advertising revenue back to players. We aim to reshape the gaming economy by making competition rewarding, fair, and permissionless - giving players real value for their time and talent.

IN 2248, MEGA-CORPORATIONS RULE EARTH, VYING TO CONTROL 'AETHERION', THE RARE FUEL ENABLING FASTER-THAN-LIGHT TRAVEL. SYNTHESISED USING RED MERCURY - FOUND DEE WITHIN CERTAIN PLANETS - AETHERION FUELS A INTERSTELLAR ECONOMY. SMUGGLERS, AND FIV RIVAL FACTIONS (MEGA-CORPORATIONS) BATTLE FOR DOMINANCE TO CONTROL ITS SUPPLY AND THE INTERSTELLAR ECONOMY. EMBEDDED WAR! TAKES PLACE ON A MINING PLANET WHERE THESE FACTIONS BATTLE IT OUT FOR CONTROL OF RESOURCES.

REWARDING - FAIR - PERMISSIONLESS

THE PROBLEM & OUR SOLUTION

Embedded solves key issues in gaming by enabling wallet-based access with no sign-ups, offering liquid and autonomous rewards, adding new monetization streams beyond ads, and automating pay outs via smart contracts - all while boosting engagement through continuous revenue sharing with top users

FOR GAMERS

No real rewards: Platforms rarely make rewarding gamers monetarily the focus of their incentivisation mechanism. Where this mechanism exists, it's seldom sustainable, especially within Web 3.0

Sign-up processes increase UX/UI friction: Users don't have to sign up; their crypto wallet can serve as their identity. The fewer clicks to play games, the better

Lack of ownership and autonomy: Embedded is wallet-native, players own their leader board standing, and rewards are liquid, transferable and not limited to a closed system

FOR DEVELOPERS

Limited monetization: Games often rely on sales and advertisement for monetization. Our platform offers another revenue stream via wallet transactions in addition to advertisement

Complex payout processes: Our rewards pay out system is algorithmic and controlled by a smart contract

Low user engagement without incentives: Direct share of platform revenue for the top 500 users continuously can be a catalyst for more engagement and virality

WHAT'S IN FOR DEVELOPERS?

Publish once on Embedded Games, and we'll put your title in front of our Web3 audience for free, cover all the blockchain heavy-lifting (wallets, gas, compliance) so there's zero risk, share marketplace and token revenues for an extra income stream, and connect you with our expanding circle of investors, publishers, and tech partners to amplify funding and co-marketing opportunities

Marketing at no additional cost:

Your title is showcased across Embedded Games' storefronts, socials, and events, giving you instant Web3 visibility without spending a cent on ads.

Additional revenue source:

You earn a share of on-chain marketplace fees and token-based rewards, adding a fresh income stream on top of any existing in-app purchases.

No-risk venture into Web3 gaming:

Ship your game to the Embedded Games platform, and we'll handle wallets, gas fees, and compliance so you can dive into Web3 without any financial or technical risk.

Access to growing network of investors and partners:

Integration automatically plugs you into our curated network of funds, publishers, and tooling partners, opening doors to funding rounds, co-marketing, and strategic collaborations.

MARKET OPPORTUNITY

While Europe shows single-digit to mid-teen penetration, LATAM, Africa and Asia remain our highest-yield target regions, as they deliver both deeper adoption rates and faster growth

COUNTRY	POPULATION (M)	CRYPTO OWNERSHIP (M)	CRYPTO OWNERSHIP (%)
Nigeria	237.5	22	10.3
South Africa	64.5	7.9	12.3
Kenya	57.5	6.1	10.7
Ghana	35.1	3.1	8.9
Egypt	118.4	3.3	3
Vietnam	101.6	21	20.6
Philippines	116.8	15.8	13.5
Brazil	212.6	26	12.2
Argentina	45.8	4.5	9.7
Mexico	131.7	8.4	6.4

Nigeria ranks #2 globally for crypto adoption

Vietnam: 1-in-5 crypto holders;
Philippines: 54% wallet ownership

One in eight **Brazilians** now holds crypto

Argentina shows the highest penetration relative to population

Mexico lags on penetration but still delivers a sizable 8 million-plus market

MARKET OPPORTUNITY

Across Nigeria, South Africa, Kenya, Ghana, Egypt, Vietnam, the Philippines, Brazil, Argentina, and Mexico, **10-25% of internet users already play, or plan to play, P2E/NFT games**, and each country **ranks in the global top 30 for grassroots crypto use**.

Collectively, that's **500+ million largely mobile-first gamers** whose familiarity with wallets and tokens dovetails with massive gaming communities, making LATAM, Africa, and Asia far richer seams for Web3 growth than the slower-adopting markets of Europe or North America

16 % already play P2E and NFT games; a further 16.9 % plan to start

23 % of adults have played P2E; 9.6 % plan to join

25 % play P2E (top-5 globally)

LATAM's biggest on-chain-gaming audience (Sensor-Tower top-5 P2E titles consistently in App-Store top-100)

Emerging P2E hubs around Cairo esports scene (industry panels, 2024); 50 M gamers; largest Arab gamer base

10.2 % play; 10.6 % plan to start; 24 M gamers; 90 % on mobile

P2E guild penetration growing (skewed towards PC)

70 M gamers; 88 % mobile

MONETIZATION MODEL

Embedded aims to ultimately provide decentralised infrastructure and means of playing PvP and PvE skill-based games, betting on the outcome of these games and winning proceeds from successful bets.

CASUAL PLAY

Revenue from casual playing of games on the Embedded Platform will come from advertising revenue and a percentage markup on Solana transaction fees to access the games, play PvP and PvE

TOURNAMENTS

The platform will host gaming tournaments, with significant pay-outs in USDC or Solana to winners. These proceeds will come from sponsors and advertisers

GAMEFI LAUNCHPAD

We aim to provide a social platform to bootstrap community participation in new Web3 gaming initiatives via airdrops - we can distribute tokens to our community to engage their interest in new Web3 games

PVP BETTING

Embedded will provide the necessary infrastructure for participants to play PvP and PvE skill-based games, with winning proceeds generated from placing bets on the outcome of these games (Embedded will take a percentage of the winnings). This feature is on the roadmap and is subject to legal consultation

[HOME](#)[ABOUT](#)[CONTENT](#)[OTHERS](#)

TRACTION & ROADMAP

While Embedded does not aim to have a token at this stage, a use case for a future token integration can include staking to earn larger platform-fee share (rewards paid in SOL to retain token value and avoid sell pressure) and unlock perks - priority matchmaking and extra airdrops.

CUSTOMER ACQUISITION OUTLINE

Leverage two top influencers, partner with Solana NFT communities for exclusive NFT drops, launch a wallet-based referral scheme sharing new-user rewards for a set time, and run regular contests that reward the most active referrers

CUSTOMER RETENTION OUTLINE

Weekly/monthly leaderboards with SOL prizes, milestone badges, and top-10 SOL airdrops. Roll out new skill-based games regularly, let players vote on the next titles, grant power users early feature access, and deliver personalized performance analytics.
